CyberResearch Product Datasheet

The cloud has changed cybersecurity. Rapid cloud adoption is now the norm, as organizations move at the speed of digital transformation. The UpGuard platform empowers cloud-enabled organizations to proactively mitigate cybersecurity risks and securely operate in an evolving threat environment. By combining world-class expertise with our AI-assisted platform, UpGuard CyberResearch seamlessly extends your capabilities in third-party risk management and data leak detection.

What is CyberResearch?

CyberResearch is a unique managed service, combining third-party risk management and data leak detection.

Managed services for third-party risk

CyberResearch relieves the burden of running your third-party risk management program. Right from the UpGuard platform, you can request a risk assessment, chase a vendor for evidence, or ask us to manage the remediation process for you. Our team can just manage your critical vendors or fully manage the TPRM process.

Protect your brand and intellectual property with data leak detection

Continuously monitor your organization and your third-party vendors for data leaks. Be instantly notified when data leaks are detected and get expert help to prioritize and remediate any exposures. We work tirelessly to monitor the surface, deep and dark web for your data.

Use data to optimize your risk management processes

Simplify and accelerate your risk management processes with real-time data and flexible workflows. Track the progress of your UpGuard analysts via your dashboard and know when risks are remediated. Using UpGuard means less email, fewer spreadsheets, and more time to focus on improving your security posture.

At a glance

✓ Managed services for third-party risk management, to reduce the burden of running a TPRM program.

✓ Get help with chasing evidence from vendors, conducting risk assessments, and risk remediation.

✓ Data leak detection by security analysts and AI-assisted platform, to protect your customers, brand and intellectual property.

> " Security posture dashboard and data leak detection tool that you need.

Gartner peerinsights™ 5.0 ★★★★★

Key features and benefits

Managed services for TPRM

Let our expert analysts manage your third-party risk management program so you can better allocate your security resources.

Evidence chasing

Collection of security evidence takes time and effort. Get help chasing your vendors to complete security questionnaires and validate their responses.

Risk assessment

Our team will combine evidence collected with UpGuard security ratings and data leak detection to create a comprehensive third-party risk assessment that you can access on an easy-to-use dashboard.

Risk remediation

We will use the results of the risk assessment to create a plan and expedite the remediation process for your team.

Data leak detection

Our detection engine and team of researchers work tirelessly to monitor the surface, deep and dark web for your sensitive data. Be instantly notified when data leaks are detected.

Vendor data leak detection

Monitor your third-party vendors and get notified when any vendor leaks their data.

We're processing over 800 billion data points each day and are directly responsible for securing over 1.9 billion records.

UpGuard is a cybersecurity platform that helps global companies prevent data breaches, monitor third-party vendors, and improve their security posture. Through proprietary security ratings, world class data leak detection capabilities and powerful remediation workflows, we proactively identify security exposures for companies.
